

evDaytona All Electric Sport Motorcycle

evDaytona All Electric Sport Motorcycle

- System Includes: AC Induction Electric Motor, AC Motor Controller, Wiring Harness, Dash Display, Controller Mounting Plate and Instructions
- Triumph Frame, Running Gear, Wheels, Tires, Brakes. Original Gas Tank as well as Custom Pro-Street tank (since no gas is needed, space available as storage box).
- System Voltage: 84 volts, AC Motor has higher torque, better acceleration and hill climbing capabilities than conventional DC system, without sacrificing Efficiency.
- Regenerative Braking: Regenerates back to the batteries down to zero speed decreasing the use of mechanical brakes, increasing run time, also will not allow vehicle to run away downhill.
- AC system has more range than any DC system.

- Totally Enclosed Fan Cooled Motor: Higher speeds require a fan-cooled motor, most DC fan cooled motors are totally open to water, dirt, dust and sand.
- 100% Maintenance Free AC Motor without Brushes or Commutator to resurface.
- High Speed Motor: AC motor can run at very high speeds without any possibility of damage. There are no Armature windings to sling apart, so Motor Speeds up to 6000 RPM will give you 25 MPH without changing Gear Ratios in the differential and losing hill climbing torque.
- Safety: Hold on Hill will keep car from rolling away on a hill, one should always-set parking brake though.
- Brake Lights during Regenerative Braking, System automatically turns on brake lights when the accelerator pedal is released and Regen Braking is applied.
- Flexibility: This system can be tailored to an Individuals needs. You can set different Max Speed, more/less Regenerative Braking or different acceleration to fit your personal preference.
- Upgradable: Controllers are software controlled, upgrades consist of either a software download or just change the "chip".
- Warranty: 5 Years or 100,000 miles on Controller and Motor

For Sale By ChopperPro.com – **\$4,879.00** (no battery) (or +3k with batteries)
